

HALO

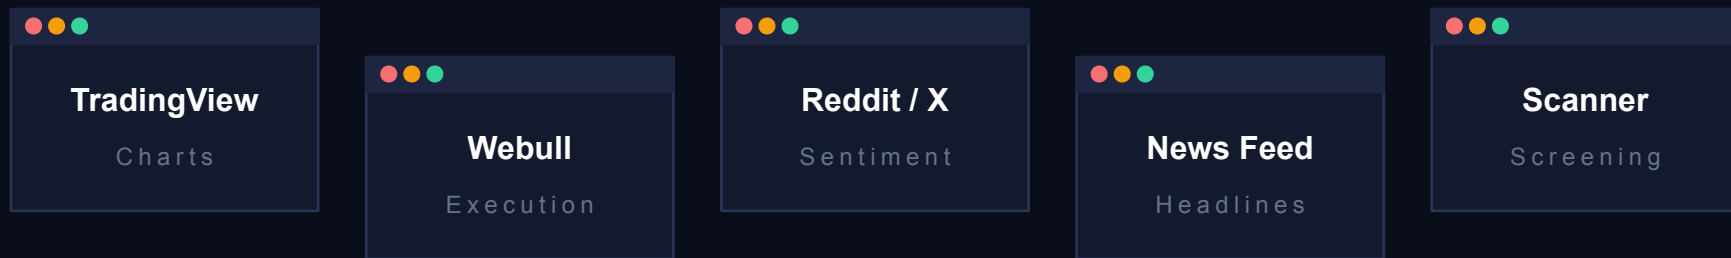

Detect. Reason. Act.

The AI trading desk that runs on your machine.

Real-time pattern detection + on-device LLM verdicts. Crypto, US equities, forex.

6 windows. Zero synthesis.

None of these talk to each other.

- Pattern tools draw boxes — they don't tell you what to do.
- By the time you spot a setup, interpret it, and size — it's gone.
- The retail trader is alone, fragmented, and a step behind.

One app watches the market. Tells you what to do.

01

DETECT

Engine identifies institutional setups in real time across crypto, equities, forex.

02

REASON

On-device LLM reads the setup and writes a structured trade verdict.

03

ACT

You see entry, stop, target, confidence, thesis. Click and execute.

No interpretation required. No window-switching. No cloud bill.

Institutional order flow, in real time.

ICT / Smart Money Concepts — millions of retail followers, zero dedicated tooling.

FVG

Fair Value Gaps

Imbalances left by aggressive moves — where price is statistically likely to revisit.

LSP

Liquidity Sweeps

Stop-hunt wicks above swing highs / below lows that signal smart-money entry.

BOS

Break of Structure

Trend confirmation — price decisively breaks the last swing point in trend direction.

Deduplication, fingerprint caching, level validation — clean signals, never spam.

Plain English. Always actionable.

On-device LLM (1GB, runs locally) generates a structured verdict the moment a setup confirms.

VERDICT • BTC / USD • 4 H			8 / 10
ENTRY	STOP	TARGET	
67,420	66,890	68,950	
THESIS			
<i>Bullish FVG retest at 67.4k confluences with H4 BOS. Momentum confirms via displaced candle close.</i>			
KEY RISKS			
CPI print in 90 min; wick into 66.7k invalidates structure.			

EVERY VERDICT SHIPS WITH

- Entry / Stop / Target
- Confidence score 1–10
- Plain-English thesis
- Key invalidation risks

1 GB MODEL • LLAMA.CPP •
ZERO CLOUD

Runs entirely on-device, no API bill.

Your edge. Your data. Your machine.

PRIVACY

Nothing leaves the device.

No cloud, no telemetry, no third party reading your watchlist.

ZERO COST

No API bill, ever.

After install, inference is free forever. No subscription tax.

LOW LATENCY

Tens of milliseconds.

No round-trip. Verdict appears the moment the setup confirms.

RESILIENT

Works offline.

After data feed cache, the AI keeps reasoning. Zero downtime.

Cloud-AI vendors charge \$20–80/month. And read everything you trade.

Charts ≠ analysis. Execution ≠ edge.

Free after install	—	—	✓

The only tool that detects, reasons, and acts — locally.

Built. Live. Working.

This is shipping software, not a deck.

● DESKTOP APP LIVE

macOS + Windows

Built in Flutter / Dart with Riverpod. Native performance, single codebase.

● AI VERDICT LAYER

Full pipeline tested

Llama.cpp + on-device 1GB model. End-to-end verdicts on real setups.

● DATA FEEDS WIRED

3 asset classes

Binance (crypto), Alpaca (equities), Finnhub (forex) — real-time WebSocket.

● EXECUTION AUTH

3 brokers integrated

Webull, Robinhood, TradingView — auth flows complete, ready to route orders.

FLUTTER • DART • RIVERPOD • LLAMA.CPP • SQLITE • WEBSOCKET

From single setup to autonomous desk.

01

Auto-screening

Continuous market scan across watchlists.

02

Sentiment layer

X / Reddit / Discord signal fusion.

03

AI position sizing

Risk-adjusted size per setup conviction.

04

End-of-day digest

What fired, what closed, what to watch.

05

Research workspaces

Per-ticker AI memory + thesis tracking.

Detect. Reason. Act.

Help us build the AI trading desk that doesn't rent your data.
